

2-NK EURkPEAN MEETING kN VASCULAR BIkLkGY ANK MEKICINE  
ULM, GERMANY EKWIN – SCHARFF – HAUS  
SEPTEMBER, 27-29 , 2001

Invitation

Kear Colleagues,  
on behalf of the German Cardiac Society and selected  
Working Groups of the European Society of Cardiology, I  
would like to invite you to participate in the

2<sup>nd</sup> European Meeting on  
Vascular Biology and Medicine

organized by the German Cardiac Society to be held  
in Ulm, Germany, from

September 27 to 29, 2001.

Following our extremely successful first meeting in Nurnberg  
in 1999, we will organize a second meeting, which provides  
a wide forum for all aspects of vascular biology and  
medicine. Focussed simposia, under the auspices of several  
different scientific societies, will cover recent developments  
in vascular cell biology, genetics, physiology, pathophysiology  
and clinical medicine. Ample time will be given to submitted  
contributions in oral and poster sessions.

The meeting will be immediately followed by the

25<sup>th</sup> Autumn Meeting of the German Cardiac  
Society,

in Ulm, from September 28 to 30, 2001. The participants of  
the vascular biology meeting will have the added  
opportunity of attending the German Cardiac Society  
meeting for the most recent information on clinical  
cardiology.

I am looking forward to welcoming you in Ulm, an attractive  
historical city on the banks of the Kanube.

Rudi Busse, President of the Meeting  
Institute of Cardiovascular Physiology  
Johann Wolfgang Goethe University Hospital  
Frankfurt on Main, Germany

Main Topics of the Scientific Programme

- Angiogenesis/vascular differentiation
- Cell adhesion: cell-cell and cell-matrix interactions
- Apoptosis, proliferation and vascular remodelling
- Vasoactive factors
- Vascular responses to mechanical load
- Intracellular mechanisms of vascular signal transduction
- Microcirculatory networks
- Endothelial dysfunction
- Atherosclerosis and restenosis
- Thrombolysis, hemostasis and platelets
- Inflammation and leucocyte biology
- Vascular permeability and fluid exchange
- Kiabetes, metabolic disorders and hypertension
- Ischemia - reperfusion
- Vascular gene therapy/new therapeutic approaches
- Transgenic animal models
